kaulshashank96@gmail.com

Software Engineer with over 7 years of experience building distributed systems and AI-driven products. Expert in TypeScript and scalable database architecture (SQL/NoSQL), with a proven track record of taking products from zero-to-one and leading highly focused engineering teams. Deep experience in building agentic systems, RAG pipelines and automating complex business logic that scales to millions of interactions.

SKILLS

TypeScript | Python | PostgreSQL | MongoDB | RabbitMQ | Node.js | AI Engineering | Voice Agents | DevOps | AWS

PROFESSIONAL EXPERIENCE

Score AI (Chennai, Remote)

Co-founder & Engineering — *Aug 2023 — Present*

- Designed and launched an AI agent that automates quality assurance in customer experience teams at major consumer brands like Hopscotch, Madpaws and The Souled Store successfully reaching $15k ARR.
- Automated compliance audits and verification of support agent escalations for 100k+ customer interactions, significantly reducing manual back-office overhead for our customers.
- Built an agentic RAG layer capable of ingesting and processing data from multiple sources (PDFs, Google Docs/Slides, Logistics APIs) to provide real-time context to our AI agent for accurate quality assurance.
- Built an integration pipeline supporting 10+ helpdesk platforms processing thousands of omnichannel interactions (voice, chat, email) daily.

Panther (US, Remote)

Senior Backend Engineer — *Aug 2022 — Jul 2023*

- Built and maintained global payroll infrastructure to facilitate cross-border payments for international contractors.
- Worked on payment processing systems handling Pay-ins & Payouts using double-entry ledgers to ensure absolute financial accuracy and data integrity.
- Designed our job batching system using RabbitMQ queues and exchanges allowing us to take on features such as bulk exports of data and contracts.
- Improved payment security by integrating third-party AI-risk detection providers, proactively mitigating wire fraud across the entire payments stack.

Klenty (Chennai, In-office)

Full Stack Engineer → Senior Full Stack Engineer — *Jul 2018 — Jul 2022*

- Led a 4-person engineering team focused on scalability where we drove technical decisions that directly improved product performance and stability with rewrites and greenfield projects.
- Redesigned MongoDB collections and indexes, reducing business critical query performance from 30+ seconds to < 1 second for working sets of multi-million documents.
- Designed and implemented an in-house clustering system that allowed us to partition customer data across databases based on volume and geographical location, directly improving system stability.
- Managed end-to-end DevOps with my team, implementing CI/CD pipelines and internal tooling for our stack on AWS and Heroku.

OPEN SOURCE PROJECTS

Vesta (https://github.com/kaulsh/vesta)

A Random Forest ML model to predict menstrual cycles within a 2-day confidence interval.

Ark For MongoDB (https://github.com/makeark/ark)

GUI with a full script editor (mongosh) and intellisense for enhanced database management. Supported inline document editing.

nyc-diff (https://github.com/codefeathers/nyc-diff)

A unit test coverage tool that identifies uncovered lines between git commits to streamline CI/CD reviews.

Minecraft Proxy (https://github.com/kaulsh/minecraft-tcp-proxy)

A TCP-layer proxy that parses Minecraft Protocol packets, enabling smart routing and custom authentication between client and server.

seedrgoose (https://github.com/kaulsh/seedrgoose)

A TypeScript library for automation test seeding using composable functions; originally made at Klenty, now open-sourced.

EDUCATION

Bachelor's of Technology in Computer Science

SRM University, Chennai, India *Jul 2014 — Jun 2018*
